VALKYRIE SECURE

As the age of technology marches forward, so too must our defenses. Valkyrie Secure is Jaytech's latest innovation a rolling code system forged to defend against signal interference and conquer the chaos of tomorrow's threats. Like the shieldmaidens of old, it stands watch over your fortress, ever adapting, ever protecting. No intruder shall pass. No signal shall falter. Modern protection. Ancient power. Only from Jaytech.

POWERFUL & QUIET 1800N DC MOTOR OPTIONAL ACCESSORIES

KEEPING IT SIMPLE

FUTURE READY WITHOUT LIMITS

In an ever-evolving world, Jaytech remains at the forefront of innovation, continuously researching and adapting as new technology emerges. Unlike others, we won't lock your motor into a single app that could quickly become outdated. Instead, we believe in giving you the freedom to choose a smart home solution that works seamlessly with all your devices, now and in the future.

PE BEAMS

Our advanced sensor system projects an invisible light beam across the path of your garage door. If the beam is interrupted by a person, vehicle, or any object, the door automatically stops closing and alerts you to the obstruction, helping prevent accidents and damage. Available in both wired and semi-wireless models for flexible, hassle-free installation.

SECURITY PIN KEYPAD

Perfect for active lifestyles or families. No need to carry a remote! Ideal for kids who may lose remotes, or to provide secure, temporary, or permanent access to tradespeople, delivery drivers, or cleaners without the hassle of handing out keys. Weather-resistant for outdoor mounting, with audible signals for confirmation. Easy to install and powered by a long-life, replaceable battery.

SUN VISOR REMOTE CONTROL

The SV02 is built for simplicity and durability, featuring large, easy-to-press buttons for quick access. A sturdy stainless steel clip keeps it securely in place wherever you go. Enjoy an impressive range and a long-lasting, replaceable battery. The 3-channel transmitter allows you to control up to three devices, with an LED indicator to keep you informed on battery status.

BATTERY BACKUP KIT

Install in under 10 minutes with ease, everything you need is included: tray, brackets, and wiring for a clean, professional finish. Powered by a 24V 3.5Ah SLA battery, this system delivers reliable performance for up to 10 open-close cycles on a single charge, with an average lifespan of 5 years.
